Heilbronn Doctoral Partnership

PhD in Mathematics

The Heilbronn Institute for Mathematical Research (HIMR) offers PhD studentships funded by the EPSRC and HIMR, tenable from October 2021. Places are available at partner universities for both home and international students, covering the home fee and maintenance.

Preferred topics of HIMR include the general areas of pure mathematics, probability, data science, and quantum information.

Students may expect to participate in summer workshops in years 1-3. It is anticipated these will be about 4 weeks in length and residential in nature (with extra costs covered).

Successful candidates should not expect to be subject to security vetting from the start, although some students may be vetted as time progresses. Successful vetting may lead to a richer experience in the summer schools.

Students from traditionally under-represented groups in mathematics are strongly encouraged to apply.

How to apply - applications may be made through your usual University process. Simply complete and submit a standard online PhD/DPhil application directly through your chosen partner university and state that you would like to be considered for the Heilbronn Doctoral Partnership.
